Competition in the Spanish electricity industry is an interactive case study developed so that students can analyze the evolution of the Spanish electricity sector from the 70s. Students study the origin of the competitors in the sector and its current situation.

This interactive case study has the following stages:

- Evolution of the sector with timelines
- Industry competitors
- Main companies
- Practical exercises
The case has a timeline with the most important moments of the sector’s history. It is complemented by graphs, a glossary, a comparison of the main companies and other interesting documents.

The case also has some key questions for students to discuss and further analyze the sector.
The value chain of the sector has to be built in an interactive exercise.
