Methodology EPC is an interactive case study which develops the EPC concept in a practical way. Students will use this methodology for representing business processes.

Through this interactive case the student will study:

- The EPC methodology
- How this methodology can be used to represent processes

Bibliography
This interactive case includes practical exercises where students can apply the EPC methodology to a process.

This example is supported by step-by-step audio which asks questions and provides feedback.

Simultaneously, through an animation, the different elements of the model are drawn. These elements appear as a consequence of the questions asked in the audio, whilst at the same time the diagram is developed automatically.
Multiple choice questions guide the student through the case. Once the student has achieved the correct solution, these will allow him/her to advance in the construction process.

To conclude the case, the student has to use the EPC methodology to represent a process.
