Economic indicators is an interactive technical note which familiarizes students with the key macroeconomic indicators that are used in country analysis.

This note describes indicators that effect:

- Production and growth
- Prices and inflation
- Unemployment
For each indicator, students are given a series of tables containing real data of different economies, together with questions that they have to answer through analysis of the data.
In the final section, students respond to a specific question about each of the 10 countries that make up the major economies in the world. To answer these, they will need to draw upon the knowledge obtained throughout the technical note.
