Introduction to financial accounting is an interactive technical note separated into five sections which details the basic concepts and theories of accounting. Interactive exercises and audio animations help develop student understanding.

This technical note contains the following five sections:

- An introduction
- The financial statements
- The accounting process
- Inventory
- A practical case

A printable version (in .pdf format) accompanies this interactive note.
In the section of The Financial Statements, students can explore the statements and see charts which show their interdependence. A practical example, with personalized feedback, allows students to put to test their knowledge.
Throughout this interactive technical note, a wide range of animations with audios guide the student through the different stages of preparing the financial statements. Each of the sections is concluded with a video from the author detailing the key points.
