Inventory management is an interactive technical note which looks at inventories and the related concepts such as batch size, warehousing, e-logistics, among others.

This interactive technical note includes the following sections:

- Inventories
- Batch size
- Warehouses
- Palletize
- Traceability
- E-logistics
This program introduces students in a simple manner to issues related to: Inventory management, the importance of optimum size, the costs associated with inventory management, etc.
Using examples and interactive exercises, the concepts of e-logistics are introduced. This program also explains how e-logistics could enable reductions in costs, decreases in reply time and improvements in service.
