Managing orders and shipping is an interactive technical note that explains how e-logistics can improve the supply chain, by reducing the steps that form it.

This interactive technical note includes the following sections:

• Preparation process
• Preparation center
• Transportation and distribution
Students will study the advantages and disadvantages of applying e-logistics in a company. The analysis will specifically be focused on total costs and quality of service.
This interactive technical note also shows, in a step by step manner, how each link of the supply chain could be improved through computerization.
