Product planning and management is an interactive technical note that develops the concept and the importance of Material Requirements Planning (MRP) systems.

Through this interactive technical note the students will study:

- Production planning
- Quality management systems
- Maintenance
The different planning process stages are shown using a scheme. It starts with the forecasting and the strategic planning and finishes with the materials planning. As well as this, it also develops the requirements planning and the production master plan.
Using images and simply charts, students analyze the technological tools available for the enterprise management.

The following topics are mentioned: MRP, ERP and quality management systems.
